

VOYAGER FOCUS UC FIRMWARE RELEASE NOTES

Version V612

April 2021

What's new

- Minor bug fixes

Version 500

May 2020

What's new

- Microsoft Teams certification – pressing headset button will now invoke the Microsoft Teams desktop application

Version 366

May 2019

What's New

- Support For Plantronics [Elara 60](#) Series mobile phone station

Version 364

January 2019

What's New

- Increase maximum receive volume
- Increase receive volume adjustment range by increasing number of steps from 8 to 15.
- Disable TWA (Time-Weighted Average) limiting and reporting while listening to multimedia. TWA in telephony mode is unchanged and still enabled (configurable by Plantronics Manager Pro and Plantronics Hub)

Resolved Issues

- Resolve compatibility issue with Mitel 6930/6940 desk phones

Version 236

June 2018

What's New

- Added support for Plantronics Manager Pro Reports Acoustic Events with Plantronics Hub for Desktop
- Added support for Plantronics Manager Pro with Plantronics Hub for iOS and Android

Resolved Issues

- Resolved issue related to changing headset language to Chinese
- Improved PC call audio when in multi-point
- Resolved issue with mute sync and Skype for Business
- Resolved issue with no Open Mic prompt with TWA enabled

Version 160

December 2017 Voyager Focus firmware version 160

What's New

- Support for Plantronics Manager Pro Reports: Conversation Details, Link Quality and Daily Noise Exposure
- Add ability to adjust sidetone level via Plantronics Hub
- Add ability to adjust volume level tones via Plantronics Hub
- Remove tone before voice prompt "volume max/min"
- Bug fixes

Version 112

March 13, 2017: Voyager Focus firmware version 112

What's New

- Added ability to configure voice prompt when answering a call.
- Added "Active Call Audio" section to customize smart sensor behaviors.

Resolved Issues

- Fixed an issue where languages other than English are not getting caller announcement voice prompt.

Version 104

June 22, 2016: Voyager Focus firmware version 104

What's New

- Added Thai and Indonesian Language Support
- Added "flash" (Hold/Resume) call function support for softphone calls when used with the BT600 adapter
- Quality improvements on both cell phone and streaming (receive-only) audio
- Miscellaneous bug fixes
- Added "Open Mic ON" and "Open Mic OFF" voice prompts
- Adaptive Dynamic Range Optimization (ADRO) activated to auto-boost call receive volume in noisy environments for improved clarity (up to the maximum safety volume)
- PC/headset volume synchronization improvement for better control of computer volume, especially with Macintosh computers
- Improved headset battery life when connected to BT600 adapter and in standby mode
- Improvements in audio synchronization with video (e.g. YouTube, Skype video calls, etc...) when using BT600 adapter

Version 40

October 20, 2015: Voyager Focus firmware version 40

What's New

- Improved audio quality and wireless range between the BT600 and headset for both mono and stereo telephony.
- Wideband On/Off setting allows a balance of audio quality vs. wireless range between the BT600 and headset. For instruction on how to enable/disable wideband audio from the headset, [click here](#).

Note: For improved wireless range to take effect, the BT600 must be updated to firmware version 56 as well as performing this update.

Version 35

July 20, 2015: Voyager Focus Firmware Version 35

What's New

- Initial Release of Product
